
IM8 Health Creative Audit, 30-Day Sprint Plan & AI- Integrated Workflow

A full-funnel creative strategy exercise on a real, live DTC subscription supplement brand — paid creative, organic content, and competitive intelligence, translated into a ranked gap analysis and an executable sprint calendar.

PREPARED BY

Ritchie Baquirin

DISCIPLINE

Creative Strategy

FORMAT

Portfolio Case Study

About this document. This is a real audit of a real brand's live advertising, organic content, and competitive set — not a hypothetical exercise. It is presented here as an independent work sample: proof of how I diagnose a DTC creative ecosystem and turn that diagnosis into a plan someone could actually execute. All data below was gathered from public sources — Meta Ad Library, TikTok, Instagram, YouTube, Trustpilot, Innerbody, and IM8/Prenetics' own press releases — current as of August 2026.

CONTENTS

Where This Document Goes

Six parts, in the order a strategist would actually work them: diagnose, compare, prioritize, plan, then show the AI workflow underneath all of it.

00 A Note on Approach

The two analytical lenses used throughout this audit, and why this reads differently from a standard creative review.

01 Paid Creative — Meta Ad Library

~1,400 active IM8 ads sorted into seven categories, hook-by-hook, with landing-page alignment checked and volume benchmarked against AG1.

02 Organic Content — TikTok, YouTube & Instagram

What's actually winning across three owned channels, what the comments reveal, and the single largest earned-media moment in the brand's history.

03 Competitive Benchmark — AG1

A fair-fight comparison that accounts for a 15-year head start, then isolates what AG1 is actually doing better.

04 Gap Analysis

Seven opportunities, ranked by impact and by how hard each is for a competitor to copy.

05 30-Day Creative Sprint Plan

Messaging pillars, audience segments, a week-by-week calendar of ten-plus concepts, and the testing framework behind it.

06 AI-Integrated Workflow

The actual prompts used to build this document — trend checks, concept generation, competitor pattern-mining, hook writing, and brief-building — with real outputs, not mockups.

Why This Reads Differently From a Standard Audit

Most audits answer **what** is happening — ad counts, format buckets, a list of things a competitor does better. That's the floor. This one tries to answer **why** it's happening, and what that means for where IM8 should spend its next dollar of creative production.

Two lenses run through everything that follows. The first is a **trust-engineering lens**: every asset in this category exists to reduce doubt, because IM8 cannot show the product working in the way a car ad can show a car driving. The second is a **behavioral-psychology lens**: people rarely buy the ingredient — they buy what believing in the ingredient lets them feel about themselves. Where the data supports a conventional read, that's stated briefly. Where it supports something sharper, that's flagged clearly as the differentiated take — marked throughout with a shaded callout box — so it can be weighed on its own merits rather than taken on faith.

01

Paid Creative Meta Ad Library — IM8 vs. AG1

~1,400 active ads, seven repeating categories, and one anomaly in IM8's own numbers that already tells the whole strategy story.

~1,400

ACTIVE META ADS

7

CREATIVE CATEGORIES

1 in 4

LANDING PAGES MISS MESSAGE MATCH

The Creative Mix, and What It's Actually Doing

Meta Ad Library — IM8 vs. AG1

IM8's ~1,400 active Meta ads sort into seven repeating categories: bundle/proof statics, Giannis cinematic and UGC content, the symptom-led "agitation" wave, expert testimonials, city/lifestyle ties, the Inter Miami CF partnership, and publisher placements.

THE SHARPER READ

These categories aren't parallel — they're sequential. IM8 spent January through June building the credibility layer (Beckham, Giannis, RCT, NSF), then pivoted hard into symptom-led "agitation" creative starting in July — now the largest, freshest share of the active library. The newest, highest-volume wave is built almost entirely on fear and discomfort appeals, while the brand's actual differentiator — celebrity-as-equity-partner, RCT-backed science — sits in the older, lower-volume wave. **IM8 is spending its freshest testing budget on the easiest part of its story to copy, not the hardest.**

The Beckham Stack Anomaly

The two earliest "Beckham Stack" bundle ads posted the lowest reach of the early wave — 28,542 and 2,609. A single reformulation ad, *"Most Supplements Stay the Same. We Don't,"* posted 63,595 reach: more than double either one.

IM8's own data is already saying it: Beckham opens the door. Proof closes it — specificity is outperforming celebrity presence alone, 2x, in IM8's own account.

The Giannis "Investor" Ad — the Best Single Asset in the Library

The Giannis first-person investor-statement ad — *"I don't just endorse things, I invest in what I believe in... I choose IM8"* — paired with a dedicated landing page, is the most strategically coherent asset in the entire inventory. It exists as one ad ID against roughly 1,400.

An ambassador who is a shareholder isn't doing celebrity marketing — he's doing **skin-in-the-game signaling**, a rarer and harder-to-fake trust mechanic than a paid endorsement. It converts "a famous person got paid to say this" into "a famous person bet his own capital on this being true." That is IM8's most defensible asset, and it is currently under-deployed by orders of magnitude.

Landing Page Alignment

Four of four ads checked: three strong matches (Giannis, menopause, Inter Miami CF), one clear miss — the alcohol/gut-brain-fog ad, routed to a generic product page.

THE SHARPER READ

The miss isn't random — it's category-specific. Ads with an existing organizational home (a partnership, a life-stage SKU) get dedicated pages. The symptom-led agitation ads — IM8's newest and fastest-growing wave — are the ones most likely to dead-end into a generic page, right at the moment, just after the fear-hook, when trust is most fragile.

Volume and Freshness

	IM8	AG1
Active ads (Meta, all formats)	~1,400	~210
Region tested	EU / UK	US (unchanged under "All Countries")
Freshness cadence	New batches every 1–2 weeks	Same concepts re-run across 4+ duplicate IDs

Active Meta ad count, IM8 vs. AG1 — volume is not the same signal as conviction (see callout below).

THE READ WORTH LEADING WITH

IM8 has volume. AG1 has conviction. AG1 has converged on a small number of winning concepts and is scaling them hard — its 1/7th ad count may reflect a tighter, higher-signal testing program, not a smaller effort.

Independent third-party confirmation — a marketing/funnel-analysis channel studying IM8's landing page structure — quantifies two things this audit inferred qualitatively: the Inter Miami CF ad copy "**ran 97 times across 18 days**", a global figure consistent with, and larger than, the ~15 near-duplicate EU Library IDs logged directly; and IM8 runs **97 distinct landing pages**, one angle to one page. That's a real, quantified discipline behind the message-match pattern noted throughout this section.

02

Organic Content TikTok, YouTube & Instagram

One pattern repeats on every platform measured — and the biggest earned-media moment in the brand's history was AI-generated.

233M

VIEWS, AI-GENERATED SABALENKA AD

1.4M

VIEWS, TOP YOUTUBE VIDEO

3

PLATFORMS, SAME WINNING PATTERN

The Beckham Problem, Restated as an Organic Problem

TikTok, YouTube & the earned conversation

The single best-performing organic asset on @im8health is a December 2024 David Beckham founder-story video — 354 likes, 13 comments, 126 saves — now over 18 months old. Every 2026 post, including new Giannis, Sabalenka, and Bearman content, underperforms it, often by an order of magnitude.

THE SHARPER READ

This isn't an ambassador problem — it's a **narrative-completeness problem**. The Beckham video works because it's the only piece of content answering the full arc: who, why, and what it means that he did this. The newer ambassador content is presence without origin story. IM8 already has the fix — the Giannis investor-statement ad — it's just sitting in paid media, not organic.

The Unaddressed Complaint, Twice

The same negative review — an unfavorable return policy on flavor combo packs — was posted verbatim by the same user across two separate TikTok videos, unaddressed both times. One unanswered comment is noise. The same complaint, twice, unaddressed, in a brand whose entire positioning rests on transparency, is a compounding trust cost.

A Sharper Objection: "Underdosing" Skepticism

Beyond price, shipping, and patience, independent review analysis — Innerbody, cross-referencing Trustpilot — surfaces a more pointed objection: a claim that some ingredient doses may fall below the levels used in the clinical studies IM8 cites. Reviewers describe generally strong outcomes, but this specific critique is aimed directly at the RCT/NSF credibility claim — IM8's core differentiator — rather than at price or convenience. It's a smaller-volume complaint than price or shipping, but a more structurally dangerous one: it doesn't just say "this costs too much," it says **"the proof itself may not fully hold up."**

THE REAL LAYER 2 FINDING

IM8 is answering a question nobody outside the brand is asking. Owned content proves "why trust this brand" — credentials, science. The dominant earned conversation asks "is this a scam / worth the price." Every dollar reinforcing scientific credibility talks past an audience that has already accepted the science and is stuck on value.

YouTube — Confirmed With Real Numbers

@IM8Health: 737 subscribers, 124 videos. Bio: *"Welcome to IM8, where cutting-edge science meets everyday wellness."* Sorted by Popular, the channel's own top uploads:

VIDEO	VIEWS	AGE
David Beckham Presents IM8 Beyond Ordinary Wellness	1.4M	1 year
What is IM8? It's not just a supplement	440K	1 year
James DiNicolantonio (SAB member): Daily Essentials vs. Multivitamin Comparison	289K	1 year
Dr. Dawn's Journey of Hope	26K	1 year
IM8 x Giannis The MVP's Most Valuable Routine	641	1 month
The Giannis Interview Joining IM8 As Global Ambassador	441	1 month

IM8's own top long-form YouTube uploads, sorted by views (log scale).

THE STRONGEST, MOST-CORROBORATED FINDING IN THIS AUDIT

The same pattern now holds on every platform measured. The single best-performing piece of content is always founder/origin-story material from launch: TikTok's top post (Beckham), Instagram's biggest owned post (Beckham, 10K likes), and now YouTube's runaway #1 by a wide margin — 1.4M views, roughly 3x the

next-best video, and hundreds of times the views of any recent ambassador upload, which top out in the hundreds. Every subsequent ambassador (Giannis, expert guests) tops out in the hundreds of views or low-thousands of likes despite a year of additional content. This is no longer a single-platform observation; it's a structural finding about the brand's entire content history.

An Honest Caveat: How Much of This Is Just Age?

A fair challenge to the finding above: older content has simply had more time to accumulate views, so some of Beckham's advantage is a straightforward function of time online, not necessarily story quality. This is a real, legitimate factor this audit did not fully control for, and it deserves to be said plainly rather than glossed over.

WHY AGE ALONE DOESN'T EXPLAIN IT

Two YouTube videos are the exact same age — both listed as "1 year ago": David Beckham Presents IM8 (1.4M views) and Dr. Dawn's Journey of Hope (26K views). Identical time online, a 50x-plus difference in outcome. If age were the whole explanation, same-age videos should perform similarly — they don't. Age is a real contributing factor that inflates the raw numbers somewhat, but it cannot be the entire explanation; something specific to that piece of content — Beckham's fame, the completeness of the story, or both together — is still doing real work independent of how long it's been online.

Also genuinely useful: the DiNicolantonio comparison video (289K views) is real, owned proof-of-concept that direct-comparison content works for IM8 in its own voice — it's just never been repeated or turned into a content pillar (see Gap #2, Section 04).

YouTube Shorts — the Format Actually Winning

Shorts substantially outperform the channel's long-form library. Top performers, sorted by Popular:

SHORT	VIEWS	ANGLE
Declutter Your Health: Simplify with IM8's All-in-One...	585K	Simplification / consolidation
Boost Your Morning Routine: The Ultimate Energy...	172K	Routine / ritual
From Science to Sports: How Ninja Natalie Fuels...	111K	Athlete / creator crossover
IM8 Was A Huge Mistake! — Too Much Energy...	62K	Negative-hook clickbait, resolves positive
IM8 vs AG1 — What's the Difference? David Nurs...	38K	Direct competitor comparison
From Overwhelmed to Empowered: Simplify Your Routine	7.2K	Simplification, repeated

YouTube Shorts performance — "simplify" is the most reliable hook; the AG1 comparison Short (highlighted) already has real traction.

TWO FINDINGS WORTH ACTING ON

First: "simplify / declutter" is IM8's single most reliable hook on this specific format — it appears at 585K, and again at smaller scale multiple times, more consistently than any ambassador name. **Second, and more important for Gap #2:** the "IM8 vs AG1" comparison Short already has real, measurable traction (38K views) — concrete, current proof that the direct-comparison content this audit recommends isn't a theoretical opportunity. It's already working at small scale, unsystematized, and worth deliberately scaling rather than inventing from nothing.

Curated Creator Content: Reach Without Discovery

The "Nutritionist Reviews IM8 (Honest Review)" video (57K views) is third-party creator content — by Jason Sani — that IM8 curates into a branded playlist, "IM8 Results: Real Users, Real Transformations" (28 videos, curated from creators including Pernilla, Alex Sears, Demi Bagby, Tavi Castro, and ANNA DAVEY Climbing and Fitness). IM8 is good at curating strong external honest-review content, but that playlist itself has only **813 total views** — almost nobody discovers these videos through IM8's own curation; they find them independently. The Scientific Advisory Board playlist fares similarly (12 videos, 652 total views): credibility content is being produced, but the packaging isn't driving discovery.

A DIFFERENT AUDIENCE ENTIRELY

One independent video — "\$108,000,000/year on Shopify | IM8 Health Landing Page & Offer Breakdown" — comes from an e-commerce/growth-marketing channel, not a health reviewer. IM8's funnel is being

studied as a case study by marketers who have never touched the product, a sign the brand's operational sophistication is drawing attention on its own terms.

Instagram — the Larger, and More Revealing, Organic Channel

@im8health: 943 posts, 317K followers, 121 following. Bio: *"The best choose the best."* This is a far larger footprint than TikTok's 12.5K — and the engagement pattern found here is sharper than TikTok alone suggested.

POST	TYPE	LIKES
David Beckham founder story ("gave me everything")	Owned, founder story	10,000
Giannis welcome post	Owned, ambassador launch	17,400
Stylized/illustrated F1 car ("willing to do to be the best")	Owned, high-production visual	150,000
Ollie Bearman welcome post	Owned, ambassador launch	1,919
Lucy Charles-Barclay (paid partnership)	Affiliate / UGC	2,750
Routine UGC / expert / lifestyle posts (13 sampled)	Mixed	30–150 typical

Instagram engagement is bimodal, not uniformly weak — three posts (crimson) dwarf everyday content (grey), log scale.

THE SHARPER READ

Engagement is strongly bimodal, not uniformly weak. Routine content — wellness-creator UGC, expert testimonials, lifestyle posts — sits at 30–150 likes against a 317K follower base, roughly 0.03–0.09%, consistent with the TikTok pattern. But three posts are massive outliers: the Beckham founder video, the Giannis launch, and one stylized F1 post that hit 150,000 likes — nearly **47% of the entire follower base**. IM8 clearly knows how to produce breakout moments; the gap between those spikes and everyday content suggests inconsistent creative investment, not a uniformly weak channel.

The Viral AI-Generated Ad — the Single Biggest Earned Moment in the Brand's History

In August 2025, IM8 — via agency Genre.ai — ran a fully AI-generated ad built around a digital twin of Aryna Sabalenka, who "wasn't able to film in person." Her likeness was generated and prompted to "drink IM8." Confirmed directly in IM8/Prenetics' own press release:

233M

Instagram views

Times Sq.

Billboard run during the US Open

~\$10,000

Total paid boosting spend

By a wide margin, the single largest engagement event anywhere in IM8's public presence, across any platform audited. This retroactively upgrades an earlier finding: the "Contains AI-generated media" flag on one TikTok post (a Wimbledon POV clip) isn't an isolated experiment — it's a second instance of an already-proven, officially-sanctioned production practice. **IM8 is not considering AI-generated creative as a future capability; it is already running one of its most successful campaigns ever through it.**

03

Competitive Benchmark What AG1 Is Doing That IM8 Should Study

Not a fair fight in age — AG1 has a 15-year head start. Read correctly, that changes what every number below actually means.

15 yrs

AG1'S HEAD START OVER IM8

9x

LONGER TIME IN MARKET

4+

CATEGORY-WIDE FINDINGS, NOT IM8-ONLY

An Honest Starting Fact: This Is Not a Fair Fight in Age

Meta, YouTube, Instagram & TikTok — IM8 vs. AG1

Before comparing follower counts or engagement, one piece of context changes how every number below should be read. AG1 — originally launched as Athletic Greens — was founded in 2010; it has had 15 years to build its audience. IM8 launched in December 2024; at the time of this audit, it has existed for roughly 20 months. **AG1 has had a head start of roughly 9 times longer in the market.**

WHY THIS MATTERS FOR EVERY COMPARISON BELOW

A brand with 15 years to post content, run ads, and get talked about will almost always have a bigger audience than a brand not yet 2 years old, regardless of how good either company's strategy is today. Read the wrong way, the follower-count gaps below could look like IM8 executing poorly. Read correctly, IM8 reaching 317K Instagram followers and 12.5K TikTok followers in under 2 years — against a competitor with a 15-year head start — is a genuinely strong result, not a weakness. What this section actually measures, then, is not "who has more people" but "what is each brand doing with the audience it has built so far" — and on that question, both brands share some of the same real problems.

One Face in Paid, Broad Reach Across Owned Channels

AG1's Meta paid ads repeat one ambassador (Hugh Jackman) across multiple concepts. That pattern does not hold once owned organic channels are included. AG1 runs owned accounts on YouTube, Instagram, and TikTok — on every one, its following is larger than IM8's — and its organic/sponsorship portfolio spans a broad multi-sport roster: Hugh Jackman, Olympic skier Mikaela Shiffrin, triathletes Gustav Iden and Laura Philipp (an Ironman content series), the USA SailGP sailing team, and — its highest-engagement Instagram post by a wide margin — full kit/jersey sponsorship of Swansea City AFC, a professional UK football club.

CHANNEL	AG1 (OWNED)	IM8 (OWNED)
YouTube	@drinkAG1: 23.1K subs, 307 videos	@IM8Health: 737 subs, 124 videos
YouTube top video	1.5M views ("Good morning, parents everywhere")	1.4M views (David Beckham Presents IM8)
Instagram	@drinkag1: 681K followers, 1,201 posts	@im8health: 317K followers, 943 posts
Instagram top post	5,622 likes (Swansea City AFC kit launch)	150,000 likes (stylized F1 post)

TikTok

@drinkag1: 110.8K followers, 880.3K total likes

@im8health: 12.5K followers, 44.4K total likes

Owned-channel following, IM8 vs. AG1 across YouTube, Instagram and TikTok (log scale).

THE SHARPER READ

AG1 out-follows IM8 on every owned channel measured — sometimes by an order of magnitude (TikTok: 110.8K vs. 12.5K). Yet its typical TikTok post earns single digits to low hundreds of likes, with two clear pinned exceptions — a 2023 launch video at 10.6K likes, a taste-test at 722 — driving nearly all of its visible engagement. This is now a fully cross-brand, cross-platform finding, not an IM8-specific weakness: both brands show the identical shape — a large follower base, a small number of pinned or founder-era spikes, and otherwise thin routine engagement. That suggests this pattern may be closer to a **category-wide norm in premium supplement marketing** than a fixable flaw unique to either brand — worth naming honestly rather than overselling as a clean IM8 opportunity.

The same playlist-underperformance pattern found on IM8's YouTube repeats on AG1's — its "Morning People" playlist shows 3,246 total views despite containing multiple 300–450K videos — and recent uploads generally underperform older ones, except for Hugh Jackman, whose 3-month-old "Neighbors Know His Routine" video already sits at 774K–1.3M views. Sustained familiarity with one face appears to be the one force strong enough to resist the recency drop-off seen everywhere else in this audit.

A Real Reputational Contrast: the Founder Story

WORTH NAMING DIRECTLY

AG1's actual founder, Chris Ashenden, resigned in 2024 after his legal history prior to founding the company became public; current CEO Kat Cole (former Cinnabon president) now runs the company. This is a genuine asymmetry against IM8's "founder-as-invested-partner" narrative — AG1's founder-trust story is a real liability, not a strength, and IM8's Beckham/Giannis equity-partner framing is more defensible here than it might first appear.

Peer Trust vs. Authority Trust

AG1's newest creative runs through named affiliate-style creators (Em Miller, Stephanie Wolfe) doing unscripted, peer-coded content. IM8's testimonials run through positioned experts (a gastroenterologist, a sports-medicine doctor) — authority-coded.

Peer content answers "will this work for someone like me"; authority content answers "is this legitimate." IM8's own review data shows the dominant unaddressed objection is skepticism — which peer-style content is generally better suited to defuse. **AG1 may be better positioned to fight the exact objection IM8 is currently losing ground on.**

The GLP-1 Angle — AG1 Got There First

A DIRECT, NAMEABLE GAP

AG1 pairs the GLP-1 moment with loss-aversion framing — "a GLP-1 can cost you your hard-earned muscle." IM8's version uses generic complementary-support framing. Loss aversion is the more behaviorally potent lever, and it's currently sitting with the competitor.

04

Gap Analysis Seven Opportunities, Ranked by Impact

Ranked using six decision filters — Trust, Clarity, Premium, Science, Differentiation, Conversion — weighted toward what's hardest for AG1 to copy.

7

RANKED OPPORTUNITIES

#1

EXTENDS IM8'S RAREST ASSET

6

DECISION FILTERS APPLIED

Seven Opportunities, Ranked by Impact

Ranked using the Creative Strategist decision filters — Trust, Clarity, Premium, Science, Differentiation, Conversion — weighted toward what's most defensible and hardest for AG1 to copy.

1

Systematize "Skin in the Game" Ambassadors

The Giannis investor-statement ad is IM8's single most differentiated, uncopyable trust asset — and it's one ad against ~1,400. Extend the exact format to Sabalenka and Bearman, with dedicated pages mirroring the Giannis structure.

2

Build an "Is IM8 Worth It?" Content Pillar

Owned content answers a question nobody's asking, while the real conversation — scam / price / worth-it, underdosing skepticism, and AG1 comparison — goes undefended. This isn't hypothetical: IM8's own James DiNicolantonio comparison video (289K views, its 3rd-best video ever) and a small "IM8 vs AG1" Short (38K views) already prove this content works. Systematize it into a real pillar instead of a one-off.

3

Fix Message-Match on the Agitation Wave

IM8's newest, highest-volume category is the one most likely to dead-end into a generic page. Build dedicated continuations for each symptom cluster, mirroring the menopause page.

4

Steal AG1's Loss-Aversion Framing on GLP-1

A live, contested cultural moment. Reframe IM8's GLP-1 creative around specific, provable loss rather than generic support — before AG1 fully owns the territory.

5

Close the Public-Complaint Loop

The same unaddressed return-policy complaint, posted twice, is a small but compounding trust cost in a category built on transparency. A standing response protocol for recurring, specific complaints.

6

Add a Genuine Peer-Trust Lane

IM8 leans authority-coded (doctors, experts). AG1's newest wave is peer-coded and better suited to defusing IM8's #1 unaddressed objection: skepticism.

7

Fix the Engagement Gap Directly, Rather Than Chasing Follower Parity

AG1 out-follows IM8 on every owned channel — YouTube, Instagram, TikTok — sometimes by an order of magnitude. But both brands show the same thin routine engagement behind a large follower count, broken only by rare pinned or founder-era spikes. Growing reach alone won't close this — IM8 should prioritize sustained format testing (Gaps #1 and #3) over chasing follower parity, since AG1's larger audience isn't translating into proportionally larger routine engagement either.

05

30-Day Creative Sprint Plan

Turning the gap analysis into an executable calendar — four pillars, three audiences, four weeks, ten-plus concepts.

4

MESSAGING PILLARS

4

SPRINT WEEKS

10+

AD CONCEPTS

Turning the Gap Analysis Into an Executable Calendar

ON CULTURAL CURRENCY

A strategy is only as sharp as its grip on what's actually moving right now, not what was trending when a report was written. Every concept below flagged "trend-native" was checked against currently-active formats rather than assumed — each is labeled **TREND PARALLEL** with the specific format it draws on. Concepts without that label are intentionally brand-specific rather than trend-riding; not every idea should chase a format, and forcing one where it doesn't fit is worse than skipping it.

Core Messaging Pillars

Four pillars, each laddering directly to a gap identified above and to a week of the sprint calendar below — not generic supplement-marketing language.

Skin in the Game, Not a Paid Face

Ambassadors who are shareholders, not spokespeople — ladders to Gap #1

Ask Us Anything

Transparency over defensiveness on price, patience, and dosing — ladders to Gaps #2, #5, #6

Built for What's Actually Happening to You

Symptom-specific, not generic wellness — ladders to Gap #3

Proof Compounds

The RCT / NSF science plus an ongoing reformulation cadence, kept specific and provable — ladders to Gap #4

Audience Segments

SEGMENT	PRIMARY OBJECTION	MESSAGING ANGLE
The Skeptical Optimizer	"Is this actually different, or just marketing?"	Proof and transparency, not celebrity
The Symptom-First Searcher	"Does this apply to my specific problem?"	Direct symptom match, dedicated pages
The Aspirational Follower	"Would someone like them actually use this?"	Ambassador-as-investor, not paid face

Funnel Mapping

Rather than describing funnel stages abstractly, each stage is mapped directly to the specific, named piece of content from the sprint calendar built for it — so it's clear exactly what a stranger sees first, what convinces them, what pushes them to buy, and what keeps them once they're a customer.

STAGE	JOB	CONTENT FROM THE CALENDAR
Awareness	Reach people who've never heard of IM8, via a new fanbase or a trending format	"8 Reasons" Page, Bearman Edition (Wk 1) · trend-native GRWM concept (Wk 4)
Consideration	Handle the two objections that stall a decision: is this real, and is it worth it	"Why I Chose to Invest," Sabalenka (Wk 1) · "Let's Just Talk About the Price" (Wk 2)
Conversion	Remove the last friction — set honest expectations, land on the right page	"Here's What 12 Weeks Actually Looks Like" (Wk 2) · dedicated symptom-cluster landing pages (Wk 3)
Retention	Reinforce ongoing rigor and close the complaint loop for existing customers	"The Formula Just Got Better (Again)" + comment-response series (Wk 4)

The Sprint Calendar

Week 1

Skin in the Game — Fix the Ambassador Format

"Why I Chose to Invest" (Sabalenka) VIDEO, FIRST-PERSON

Hook: "People assume I get paid to say this." Mirrors the Giannis investor-statement structure exactly, ending on a dedicated landing page card.

"8 Reasons" Page, Bearman Edition CAROUSEL, 8 CARDS

Hook: "Oliver Bearman doesn't just drive for IM8. He owns a piece of it." Extends the proven Giannis page format to F1's distinct fanbase.

Week 2

Ask Us Directly — Own the Skepticism Conversation

"Let's Just Talk About the Price" LOW-FI VIDEO, DIRECT-TO-CAMERA

Hook: "I know what you're thinking — \$150 for a supplement?" Breaks down cost vs. 16 separate supplements, on-screen math. **TREND PARALLEL** mirrors the confessional "Unfortunately, I do love..." honest-listicle format currently trending on TikTok — self-aware admission before the payoff, not a defensive pitch.

"Here's What 12 Weeks Actually Looks Like" CAROUSEL, WEEK-BY-WEEK

Honest expectation-setting tied to the actual RCT window — answers the #1 patience complaint directly. **TREND PARALLEL** uses the micro-learning structure (one video, one job, fast visual proof) currently outperforming pure entertainment content on both TikTok and Instagram.

Week 3

Built for What's Actually Happening to You

Dedicated landing pages, top 3 symptom clusters PRODUCTION TASK, NOT AN AD

Build alcohol-recovery, joint-collagen, and cortisol-bloating pages mirroring the menopause page exactly.

"Not a Drinking Problem," extended SAME HOOK, NEW DESTINATION

Same high-performing hook, new destination — isolates whether fixing message-match alone lifts conversion.

Week 4

Proof Compounds + Trend-Native + GLP-1 Reframe

"You Can Lose Weight Without Losing Muscle" UGC, PEER-CODED

Hook: "Nobody tells you this about GLP-1s." Reframes IM8's existing ad using AG1's sharper loss-aversion structure. **TREND PARALLEL** built on the POV format, one of TikTok's strongest, most durable formats going into its third year of relevance.

"The Formula Just Got Better (Again)" + trend-native morning routine + comment-response series MULTI-FORMAT

Reinforces ongoing rigor, claims a currently-trending native format, and closes the public-complaint loop from Gap #5. TREND PARALLEL the morning-routine concept is built on the "companion-style" / "with me" format ("get ready with me," "9-to-5 with me") — one of TikTok's most durable and still-growing formats. TREND PARALLEL the comment-response series is built on the stitch/reply-to-comment format — turning comment questions into pinned video replies — a current way to scale objection-handling without it reading as damage control.

Testing Framework

Variables tested	Hook type (fear vs. peer vs. proof-led), landing destination (generic vs. dedicated), ambassador framing (spokesperson vs. investor)
Variants per concept	3–4, hook varied, format held constant to isolate the messaging variable
Success metrics	CTR, 3-second retention, landing scroll depth as a message-match proxy, CVR
Kill criteria	Below-median CTR after 3 days at minimum spend, no CVR lift
Iteration	Winners get ported across ambassadors and symptom clusters; losers are retired, not iterated indefinitely

AUTONOMOUS SCRAPING

Real Prompts, Run Against Real Data Already Collected

ON TRANSPARENCY — AND ON PRECEDENT

This workflow is paste-in, not live-scraping. Meta Ad Library has no public API for non-political ads, and TikTok's libraries are similarly closed. The honest state of this category's tooling today is AI-assisted analysis of manually-gathered data — not an autonomous agent scraping competitors live. Every output below was reviewed and narrowed by a strategist, not shipped as-is. Worth noting: IM8 itself is not new to AI-generated production — its 233M-view AI-generated Sabalenka ad (Section 02) is direct proof this brand already treats AI as a production tool, not a future experiment.

1 · Trend Research & Cultural Mining

Used to test whether a trending format is worth building on before committing production time — checking fit rather than chasing every trend. Every trend cited in this document was verified as currently active, not recalled from memory.

PROMPT

Here's a current short-form trend format: [describe format/structure]. Would IM8 fit naturally into this without feeling forced? What's the risk of feeling like an ad within this format? Give me one execution that would feel native, and one reason to skip it if it doesn't fit.

ACTUAL OUTPUT — RUN AGAINST THE "COMPANION-STYLE" / "WITH ME" TIKTOK FORMAT, AHEAD OF SPRINT WEEK 4

Fit: strong — the format's whole appeal is simulating a shared, low-pressure routine, which suits a morning-supplement brand more naturally than most product categories. **Risk:** if IM8 is positioned as the entire point of the video rather than one beat in it, the format's implicit promise breaks immediately. **Native execution:** a "get ready with me"-style video where IM8 appears once, unscripted, alongside 4–5 other real morning beats. **Reason to skip:** if the creator can't make any part of the routine genuinely unpolished, don't force it — a too-polished version reads worse than not doing it at all.

2 · Ad Concept Generation

Used once a gap or objection is identified, to generate a wide set of concept directions fast, before narrowing to what actually makes the sprint calendar.

PROMPT

We've identified this gap: [describe finding]. Generate 6 distinct ad concepts that address it, each with: a one-line angle, the format, the first-3-second hook, and one sentence on why this concept specifically earns attention. Vary the emotional register across the 6.

ACTUAL OUTPUT — RUN AGAINST THE UNDERDOSING-SKEPTICISM GAP (SECTION 02) · 6 GENERATED, 2 SELECTED

1. Side-by-side dose comparison graphic vs. published RCT levels — static, confident tone **SELECTED**
2. Founder/scientist direct-to-camera addressing the claim head-on — video, serious tone
3. UGC creator reading the label out loud, skeptically — UGC, comedic tone **SELECTED**
4. Carousel walking through why clinical-dose vs. label-dose differs by ingredient — carousel, educational tone
5. Split-screen "what critics say vs. what's actually in the RCT" — video, confrontational tone
6. Customer service screenshot responding to a real underdosing question — static, transparent tone

Selection logic: concepts 1 and 3 test the same objection with opposite trust mechanics — authority-coded specificity vs. peer-coded skepticism — letting the testing framework isolate which register actually moves the needle, rather than guessing upfront.

3 · Competitor Analysis at Scale

Used to extract patterns across a large logged batch of competitor ads fast, rather than eyeballing each one individually — the same method used to build Section 03 of this audit.

PROMPT

Here are [N] competitor ads logged with ID, date, angle, and copy: [paste batch]. Identify: (1) which concepts repeat across multiple IDs and how many times, (2) what that repetition implies about where their budget is concentrated, (3) any angle in this batch we haven't tested ourselves, ranked by how directly it threatens our own positioning.

ACTUAL OUTPUT — RUN AGAINST 32 LOGGED AG1 ADS

Repetition: the "90 Days of AG1" challenge-framing concept appears on 4+ separate Library IDs with identical copy — the single most-repeated concept in the batch, implying it's their highest-conviction performer. **Budget signal:** repetition concentration this high across a smaller total ad count (~210 vs. our ~1,400) suggests a tighter, higher-signal testing program rather than simply less effort. **Untested angle, ranked highest-threat:** the GLP-1/ muscle-preservation loss-aversion ad — it pairs a live cultural moment with a specific, provable mechanism, and we have no equivalent framing running at comparable weight.

4 · Copy & Hook Writing

Used early in sprint concepting once the angle and audience are set, to generate 8–10 hook options fast before handoff to an editor.

PROMPT

Generate 10 first-3-second video hooks for the following ad concept. Rules: under 12 words each, no "miracle," "secret," "breakthrough," or other banned superlative language, at least 3 should use direct address ("you"), at least 2 should use a pattern-interrupt structure. Flag which 2 you'd test first, and why.

ACTUAL OUTPUT — RUN AGAINST "LET'S JUST TALK ABOUT THE PRICE" (SPRINT WEEK 2) · TOP PICKS OF 10

"Before you close this ad — one honest number." and "Skip the sales pitch — here's the actual cost breakdown."

Selected for using a pattern-interrupt against scroll-past behavior, and for pre-emptively signaling "no sales pitch," directly defusing the skepticism objection this concept exists to solve.

5 · Creative Brief Generation

Used to convert an approved concept straight into a brief an editor or UGC creator can shoot from, without a separate manual write-up step.

PROMPT

Turn this approved concept into a one-page creative brief formatted for a UGC creator: [concept name, angle, hook, audience, funnel stage]. Include: what's on screen, what's said (direction only, not scripted word-for-word), what NOT to do, the CTA, and one line on why this will work.

ACTUAL OUTPUT — RUN AGAINST "WHY I CHOSE TO INVEST" (SABALENKA, SPRINT WEEK 1)

On screen: Sabalenka mid-training or off-court, casual setting, direct to camera, no studio polish. **Direction:** open by naming the assumption ("people assume I get paid to say this"), then state plainly that she holds equity, not just a fee — in her own words. Close on the product only after the equity point lands, never before. **What NOT to do:** don't open with the product, don't use scripted-sounding VO, don't over-produce the setting. **CTA:** dedicated landing page card, mirroring the Giannis investor-statement page structure exactly. **Why this works:** it's IM8's single most defensible trust mechanic, currently deployed on only one ad against ~1,400 — this extends it to a second ambassador with proven asset architecture already in place.

6 · Performance Pattern Recognition

Since this sprint hasn't shipped yet, this skill is demonstrated against real historical data already collected across this audit — the same method would apply directly once live campaign metrics exist.

PROMPT

Here's view/engagement data across our own and a competitor's content, by type and age: [paste data]. What pattern correlates most strongly with performance, and what's one testable hypothesis this suggests for our next sprint?

ACTUAL OUTPUT — RUN AGAINST THE FULL CROSS-PLATFORM DATASET GATHERED IN SECTIONS 01-03

Strongest correlating pattern: founder/origin-story content from launch outperforms every subsequent ambassador upload, on every platform measured, regardless of follower count or recency — IM8's top TikTok, Instagram, and YouTube assets are all Beckham founder-story content; the one clear exception across both brands is AG1's Hugh Jackman, whose 3-month-old video still pulls 774K+ views through sustained single-face familiarity rather than founder-story specifically. **Testable hypothesis:** narrative completeness (who, why, what it means) predicts performance better than ambassador fame or platform reach — test this by giving Sabalenka and Bearman the same origin-story treatment Beckham and Giannis already have, and measure whether it closes the gap against their current presence-only content.

7 · Prompt Library

PROMPT	WHEN TO USE IT
/trend-scan	Checking a trending format's fit before committing production time to it
/concept-generator	Turning an identified gap into 5–6 distinct, varied ad concept directions fast
/angle-teardown	Reacting fast to a competitor's new ad; extracting patterns across a large logged batch
/hook-generator	Early sprint concepting — cuts hook-brainstorming time from ~30 min to ~5
/brief-builder	Converts an approved concept into a one-page brief formatted for editors and UGC creators
/comment-mine	Turning reviews or comments into a ranked, actionable objection list
/score-ad	Rates our own creative against the six decision filters before it ships

THE HONEST LIMITATION

None of these skills replace judgment. They compress the first draft so a strategist spends time on selection and refinement, not generation from scratch — AI for volume and speed, human for judgment and selection.

ABOUT THIS CASE STUDY

Why This Document Exists in This Form

This audit, sprint plan, and AI workflow were developed as a real, ground-up creative strategy exercise on IM8 Health — a live DTC subscription brand, not a hypothetical one. Every figure, finding, and recommendation reflects the same real brand, gathered from the same public sources.

It's shared here as a portfolio case study for one reason: the work itself is the strongest evidence available of how I approach a DTC creative ecosystem — diagnosing what's actually happening in paid and organic creative, separating the obvious read from the sharper one, benchmarking honestly against a competitor with a very different starting position, and turning all of it into a plan with named concepts, hooks, formats, and a testing framework a team could run next week.
